What TellMore AI is

TellMore AI is a chatbot for Bangladeshi businesses. You connect your Facebook Page, your Instagram account, your WhatsApp number and your website. After that, when a customer writes, the bot answers — about your products, your prices, your delivery charge, your opening hours — and it does it in whatever language the customer wrote in, including Banglish typed in English letters.

It is not a menu of buttons. The customer writes the way they normally write, and the bot understands. It can read a photo the customer sends and find that product in your catalogue. It can listen to a voice note. It can take an order and write it down for you.

When the bot cannot answer, or when a customer asks for a person, it stops and hands the chat to you. Every conversation stays in one inbox, whichever app it came from.

Four channels, one inbox

Messenger, Instagram, WhatsApp and a chat bubble on your own website — all in the same screen.

Bangla, Banglish and English

The bot replies in the language the customer used.

It knows your shop

Your products, prices, stock, delivery charges and your own written answers.

You stay in control

Take over any chat with one tap. Turn the bot off for one customer or for everybody.

How it works

1

Connect

Sign in, press Connect, and choose your Page or account. No IDs to find, no tokens to copy. One click.

2

Teach

Add products — type them, drop a folder of photos and let the AI name them, or paste your shop's web address and let it pull them in. Upload price lists or policy documents if you have them.

3

Answer

The bot starts answering. Every reply uses your catalogue and your own written rules, never a guess.

4

Watch

Read every chat in the Inbox, take over when you want, and see in Analytics what customers keep asking.

Overview

The first screen after you sign in.

Conversations today, how many of them the bot answered without you, orders and revenue for the day, and the messages that are still waiting for a person. The Channels panel on the right shows each connected account and how many chats it took today.

How to use it: Open the dashboard. Anything marked “Needs you” is a customer the bot could not finish with — press Open to read it.

Overview — service business

The same screen for an agency, clinic or service business.

Service businesses

Instead of orders and stock it shows bookings and enquiries. The product is built for two kinds of business and every screen knows which one you are.

How to use it: Your business type is chosen during setup and can be changed in Profile.

Inbox

Every chat from every channel, in one list.

Messenger, Instagram, WhatsApp and website chats sit together. Each one shows which channel it came from, what the customer last said, and a tag the AI added — Order, Delivery, Complaint. The right panel shows that customer's history and their orders. The green switch turns the bot on or off for that one customer.

How to use it: Press a name to open the chat. Press “Take over” to answer yourself — the bot stops for that customer until you switch it back on. You can send a photo, a picture from your gallery, or a voice note.

Comments

Replies under your posts, handled for you.

Post comments

Comments on your posts and how the bot handled them

Refresh

1 inbox message could not be delivered. A private reply is blocked when the comment came from a Page or business account instead of a personal profile, when the person's privacy settings disallow it, when one was already sent for that comment, or when the comment is too old. The reason for each is shown below.

THEIR COMMENT

Delivery ki Cumilla te ache? Price koto?

BOT REPLY

Yes, we deliver to Cumilla — usually within 2 days. The price is 1,450 BDT including delivery.

Inbox message: This person cannot be messaged privately.

When someone comments on a Facebook or Instagram post, the bot can reply publicly under the comment and send the same person a private message. Every comment it handled is listed here so you can see what was said.

How to use it: Turn it on in Bot Training. Meta allows one private reply per comment, within seven days — the product follows that rule for you.

Products

Your catalogue — what the bot answers from.

Shops

The interface displays a product catalogue with the following components:

- Summary Cards:** 4 PRODUCTS, 4 CATEGORIES, 3 VARIANTS, 1 LOW STOCK, 1 OUT OF STOCK.
- Search Bar:** Search name, code, tag, brand... with filters: All, In stock, Low (1), Out (1), Not ready (4), Newest first, and a menu icon.
- Buttons:** Offers, Add products, AI Assistant.
- Alert:** 4 products are not ready to sell. 1 whose photo could not be read, so it cannot be found by picture, 3 without a photo. Open one to fix it. Show them.
- CATEGORIES:** All products (4), Kids (1), Men > Panjabi (1), Men > Polo (1), Winter (1).
- Overview image for a category:** Pick a category to set the image + intro the bot sends when a customer asks broadly about it. Options: Kids, Men > Panjabi, Men > Polo, Winter.
- Product Cards:**
 - Cotton panjabi — navy:** P3-NVY-01 · Nokshi, ₹1,450 (was ₹650), Men > Panjabi.
 - Half-sleeve polo — olive:** PL-OLV-04 · Nokshi, ₹850, Men > Polo.
 - Kids' kurta set — mustard:** KD-MST-02 · Nokshi, ₹990 (was ₹200), Kids.

Name, code, category, price, offer price, stock and photos. The bot only ever quotes what is written here, so a price on this screen is the price a customer is told. Out-of-stock items are said to be out of stock rather than sold.

How to use it: Add a product by hand, or use the two faster ways on the next pages. Edit a price here and the next customer hears the new one.

AI Assistant

Tell it what you want; it does the work.

A chat inside your dashboard. Ask it to add a product, set an offer, change a price or explain a setting, and it prepares the change and shows it to you before anything is saved.

How to use it: Type what you want in plain words — “put 20% off on all panjabi until Friday”. Read what it proposes, then approve or cancel. Nothing changes until you approve.

Knowledge Base

Frequently asked questions.txt

Text

Ready

11 pieces indexed · 25 Aug 2026

Upload a price list, a service description, a warranty policy or a set of frequently asked questions. The bot reads them and answers from them, quoting your own wording rather than inventing something.

How to use it: Upload the file and wait for it to finish processing. Ask the bot a question from that document to check it.

Connect your Google Calendar and the bot can offer the times you are actually free, book the one the customer picks, and send both of you a Meet link.

How to use it: Connect the calendar once from this screen. After that the bot checks it before offering any time, so it cannot double-book you.

Broadcasts

One message to many customers.

Write your message

You can only message people who wrote to you in the last 24 hours. That is Meta's rule, not ours — sending outside it can get your Page blocked.

MESSAGE

Write exactly what your customers will receive...

Send an offer or an announcement to customers who have written to you recently. You choose who by tag — everyone who asked about delivery, everyone who ordered, and so on.

How to use it: Write the message, pick who it goes to, and send. Messenger and WhatsApp only allow a business to message someone within 24 hours of their last message; the product enforces that rule, so a broadcast only reaches people it is allowed to reach.

Channels

Connect Messenger, Instagram, WhatsApp and your website.

Fill in what it should know — it writes its own training from this

✦ Prefer to be asked? The AI Assistant can fill any of this in from a conversation, and shows you the change before it saves.

AI Assistant

DESCRIBE YOUR BUSINESS

e.g. We sell men's t-shirts, 350 to 600 each. Write in any language.

Start from an example and edit it:

Jewelry shop

Cake & food

Clothing store

Cosmetics & skincare

Electronics & gadgets

Shoes & bags

Baby & kids

Furniture & decor

Grocery & organic

Books & stationery

MAIN PRODUCTS / CATEGORIES

e.g. T-shirts, polo shirts, panjabi. Best sellers are plain t-shirts and panjabi.

DELIVERY (TIME & CHARGE)

e.g. Inside the city 60 (1-2 days), outside 120 (2-3 days)

DELIVERY AREAS

Your business name, what you sell, your opening hours, your delivery charges, your tone, and the languages to answer in. This is also where you switch individual abilities on and off — photo matching, voice notes, comment replies, follow-ups.

How to use it: Fill in what is true for your business and save. Some rules are fixed by the platform and cannot be removed — the bot will not invent a price, and it will not promise what your catalogue does not have.

Analytics

What customers actually ask.

Messages over time, how many the bot handled alone, which products are asked about most, and which questions it could not answer. That last list is the useful one — it tells you exactly what to add to your catalogue or your documents.

How to use it: Read the unanswered questions each week and fix the gaps. The bot gets better because you fed it, not by itself.

Your own AI key

Run the bot on your own account, at a lower price.

If you would rather pay Google or OpenAI directly for the AI, you can paste your own key here. The package price drops, and the AI usage is billed to you by the provider instead of by us.

How to use it: Ask us to allow it for your account, then paste your key. The key is checked before it is saved and stored encrypted; no screen ever shows it again in full.

Billing

Your package, your usage, your payments.

Your package

What this account runs on — the same limits the bot enforces.

Package: Shop Growth

Status: Active

Valid until: 10/14/2026

Bot replies today: 62

Bot replies this month: 1834 / 5000

Manage / upgrade package

Your business name and logo, your business type, the dashboard language (English or Bangla), light or dark appearance, and notifications on your phone when a customer needs you.

How to use it: Turn notifications on so you are told when a chat needs a person, even with the dashboard closed.

Also included

Photo product matching

A customer sends a photo; the bot finds that product in your catalogue and answers about it. Shops only.

Voice message understanding

A voice note is listened to and answered like any other message.

Follow-up messages

A customer who asked and went quiet gets one polite nudge — inside the 24-hour window the platforms allow.

Add products from photos

Drop a folder of product photos; the AI names them, groups them and writes the descriptions for you to check.

Import from a website

Paste the address of your existing online shop and the products are pulled in.

The native Android app

The same dashboard as an app on your phone, with notifications.

Packages

Prices in Bangladeshi taka. Every package includes every channel and every feature — the only number that changes is how many replies the bot may send.

For shops (e-commerce)

Package	Per month	Per year	With your own AI key	Bot replies / month
Shop Basic	৳2,699	৳26,990	৳1,999	2,000
Shop Pro	৳5,999	৳59,990	৳4,499	5,500

Package	Per month	Per year	With your own AI key	Bot replies / month
Shop Enterprise	₹11,999	₹119,990	₹8,999	12,000

For service businesses

Package	Per month	Per year	With your own AI key	Bot replies / month
Service Basic	₹2,299	₹22,990	₹1,699	2,000
Service Pro	₹4,999	₹49,990	₹3,499	5,500
Service Enterprise	₹9,999	₹99,990	₹7,499	12,000

- Free trial: 3 days, up to 30 bot replies a day. No card and no payment details are asked for.
- Paying yearly costs ten months instead of twelve.
- A “reply” is one message the bot sends to a customer. Replies you type yourself are never counted.
- Bring your own Google or OpenAI key and the package price drops to the fourth column; you then pay the AI provider directly for what you use.
- Payment by bKash, Nagad or Rocket.

How TellMore AI compares

There are good chatbot platforms in the world. Most of them were not built for a business in Bangladesh. What follows is where TellMore AI differs, on points you can check for yourself — not a claim that one product beats another at everything.

	TellMore AI	Typical global platform
Language	Answers in Bangla, in English, and in Banglish typed in English letters — because that is how customers here actually write.	Built English-first. Bangla varies by provider, and Banglish is rarely handled at all.
Price and currency	Priced in taka. Paid with bKash, Nagad or Rocket.	Priced in US dollars and paid by international card, which many small businesses here do not have.
What you pay for	Bot replies per month, stated plainly. Replies you type yourself are free.	Often per “conversation” or per contact, counted in ways worth reading carefully. Check each provider’s own definition.
AI cost	Included — or bring your own Google or OpenAI key and pay less for the package.	Frequently a separate add-on or a monthly credit balance on top of the plan.
Channels	Messenger, Instagram, WhatsApp and a website widget — all four in every package, including the cheapest.	Channels are commonly divided across price tiers.
Your catalogue	The bot quotes only the prices and stock written in your catalogue, and is built so it cannot invent a price.	Varies. Many are flow builders, where you write the answers and the branching yourself.
Support	In Bangladesh, in Bangla, in your own working hours.	Usually email, from another country and another working day.

Sources for the prices above

- **Chatfuel** (chatfuel.com/pricing, 25 Sep 2026): Business US\$20 a month (US\$18 if billed yearly), including US\$20 of AI credit a month. Agency S US\$90 a month.
- **Tidio** (tidio.com/pricing, 25 Sep 2026): Free for 50 conversations. Starter US\$29 a month for 100 billable conversations. Growth from US\$59 a month for 250. The Lyro AI agent is a separate add-on from US\$32.50 a month.

Where we are the smaller company

- Autolinium is a young Bangladeshi company. The global platforms have run for years, have far larger teams, and have app-store integrations and marketplace listings that we do not.
- We publish no customer case studies, because we have not measured any yet. When we have, we will publish the measurement rather than the adjective.
- Competitor prices change. Everything quoted here was read from the companies' own pages on 25 September 2026 — please check for yourself before relying on it.

Your data

One business cannot see another

The separation is enforced by the database itself, not by a rule a programmer has to remember. Every table is locked, and every row is tied to the account that owns it.

Your keys stay yours

If you use your own AI key it is verified, encrypted and stored; no screen ever shows it again in full.

We follow the platforms' rules

Messenger and WhatsApp allow a business to message a customer only within 24 hours of that customer's message. The product enforces this for you, so your Page is not put at risk.

You can delete everything

Deleting your business deletes its products, chats, orders and uploaded files along with it.
